Backend engineer with 5 years at Addepar, promoted from client support to Senior Software Engineer. Built high-impact financial APIs serving \$25M ARR in client commitments, and led performance work including a 5x increase in Elasticsearch export limits and 40% faster response times.

EXPERIENCE

Addepar

Sept 2021 - Present

Senior Software Engineer

Mar 2026 - Present

Software Engineer II

Sept 2024 - Mar 2026

Software Engineer

June 2023 - Sept 2024

- Improved the performance of a financial positions export API by 8x, significantly reducing wait times for large client data exports.
- Added historical valuation tracking, closing a longstanding gap and fulfilling a key regulatory requirement for institutional clients.
- Built an AI agent to triage Sentry issues and automatically file bug tickets, reducing manual incident triage overhead.
- Designed and implemented multiple APIs to enable efficient access to vital financial data, fulfilling a commitment to clients with a combined ARR of \$25M.
- Enhanced performance of Elasticsearch-backed audit trail, resulting in a five-fold increase in the result export limit and a 40% decrease in response times.
- Introduced filtering parameters and asynchronous export capabilities to pivotal APIs, cutting request times by 30% and enabling efficient access to large transaction datasets.
- Engineered a benchmark proxy system to automatically estimate security performance, eliminating manual return inputs and delivering more timely, accurate portfolio insights to end clients.

Technical Support Analyst

May 2022 - June 2023

Client Support Analyst

Sept 2021 - May 2022

- Diagnosed and resolved critical incidents and client-reported API/integration issues, escalating to engineering as needed to maintain system stability.

Freelance Contract

May 2024 - Sept 2025

Backend Developer

Part-time, concurrent with Addepar

- Inherited and stabilized a fragmented codebase, refactoring the backend architecture to production-ready quality as the sole backend engineer on the project.
- Drove database migration from Supabase to self-managed PostgreSQL, eliminating third-party infrastructure dependency and improving architectural control over a stabilized codebase.
- Implemented passkey authentication flows, delivering a modern, passwordless login experience in line with

current security best practices.

- Architected secure payment infrastructure via Stripe API, engineering multiple payment flows to support both direct donations and competitive auction transactions.

SKILLS

Languages & Frameworks

Java (Spring Boot, Quarkus)

TypeScript (React, Node.js, Express)

RESTful API Development

Data & Infrastructure

SQL (MySQL, PostgreSQL)

Elasticsearch

Database Design and Optimization

Kubernetes

Docker

Testing & Tooling

JUnit

TestNG

Github Actions

EDUCATION

Bachelor of Science in Applied Mathematics

Southern Utah University - Cedar City, UT

- Graduated summa cum laude
- Minors in Finance, Computer Science
